

M.A. Drip Edge

Fixing the edge of a Membrane Roof has never been easier.

Description:

The **WMAI M.A. Drip Edge** is an aluminium extruded profile. It comes pre-drilled and more economical than the usual 3mm thick aluminium angle.

The **M.A. Drip Edge** is made from the finest 2mm Aluminium. The design means a straight edge every time. The angle prevents warping or twisting. The pre-drilled holes mean quicker fixing with no drill swarf to get into the membrane detailing.

Installation:

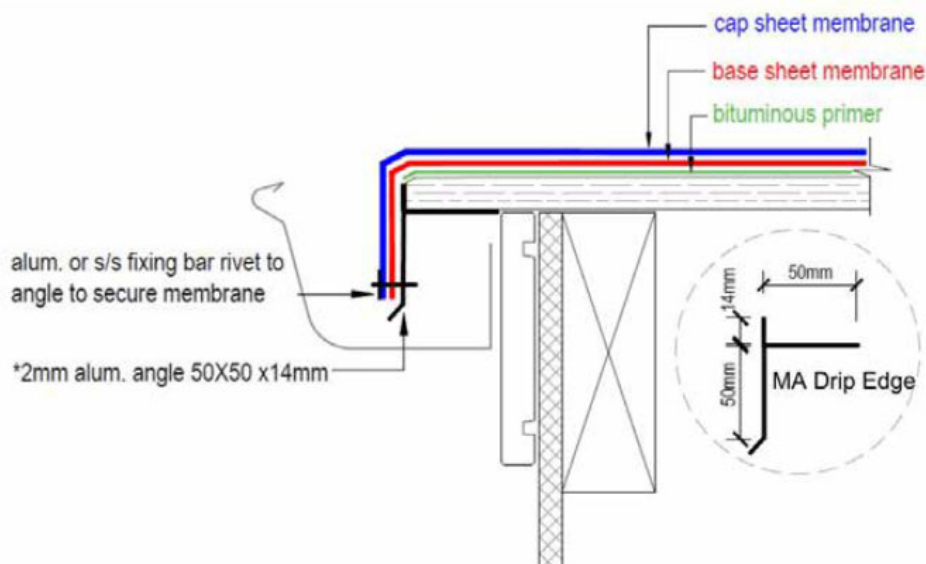

Easy to install with pre-drilled holes:

- Push the drip edge tight into place.
- Put the screw in, and it holds itself.
- Screw in the remaining screws.

Full installation instructions are shown on page 58 of the Code of Practice for Reinforced Modified Bitumen Membrane Systems (RMBM). The design of the drip edge means it can be used with any sheet membrane system.

Specifications:

Gauge	2mm
Length	3 metres
Width	50mm
Depth	64mm
Pre-drilled	4mm diameter @ 300mm centres
Packaging	5 x 3m lengths (bundled)

Metal drip edge, proprietary angle
